

Genus troides

Description

Collection of **Troides butterflies**, a genus known for its large, vibrant yellow and black wings. These specimens are displayed with both male and female butterflies, highlighting their striking color patterns and the diversity within the genus. Troides species, commonly referred to as **birdwing butterflies**, are renowned for their size and beauty, making them a popular subject in both scientific study and butterfly collections. The arrangement provides a detailed look at various species and subspecies within the Troides genus, each with its distinct wing patterns and coloration.
