

## Genus zeunera

### Description

This image showcases two specimens of the *Zeunera alexandrea* butterfly, one of the most striking species due to its vivid coloration. The top specimen exhibits brilliant **iridescent turquoise and black wings**, making it highly distinctive, while the lower specimen has **brown wings with lighter markings**, highlighting sexual dimorphism or variations in appearance within the species. The butterflies are part of a collection from New Guinea, known for its rich biodiversity. This display emphasizes the beauty and uniqueness of the **Zeunera** genus, particularly the eye-catching colors of *Z. alexandrea*.
